

15 *A2*
[said body member having a central wear pad at the center of said dome-shaped outer face, said central wear pad being a weight-bearing surface such as to support the majority of the body weight placed on the cleat and tending to keep weight off said traction teeth to prolong the life of said traction teeth and the golf shoe cleat].

A3
19. (Amended) The golf cleat defined in Claim 15 wherein said mounting member includes a threaded stud [has] having a helical groove extending from the base of said main body member outwardly and an at least one plastic fillet member bridging a portion of said helical groove so as to prevent loosening of said cleat during use.

R E M A R K S

The above-requested amendments have been made to improve the form of the claims; to correct antecedence; to delete the central wear pad from Claim 11 and its dependent Claims 12 and 13 and Claim 15 and its dependent Claims 16 - 19; and some of the references to "threaded stud" have been broadened to encompass more broadly the mounting devices shown in Figures 7A, 7B, 8A and 8B.

Respectfully submitted,

Jim Legeer
